1. Fastest Delivery
2. Secure & Safe
3. Affordable Price
4. Customer Support
5. High Integrity

Experience the Spices of Tanzania

Uplift your senses with the warm, rich, fragrant scent of clove, pepper, ginger, cinnamon and cardamom –the signature scents of Tanzanian spices.

The United Republic of Tanzania places a high value on the local spice industry and its potential for the economy. The Government created the Tanzania Spices label to support the sector, through the Tanzania Trade Development Authority (TanTrade) and the private sector, represented by the Tanzania Spices Association (TASPA)

Tanzania produces over 30 important spice crops that, in the long term, will be covered by the Tanzania Spices label. These include clove, pepper, ginger, cinnamon, cardamom, vanilla, chillies, onion, coriander, garlic and lemongrass.

In the short term, Tanzania Spices focuses on crops with the highest potential for export and production improvement. These are clove, pepper, ginger, cinnamon and cardamom.

Clove makes up over 90% of Tanzania's global spices exports. It is mainly grown in Zanzibar but production is rapidly expanding on the mainland. Pepper and ginger exports are also increasing, in line with strong global consumption.

Tanzania produces Ceylon cinnamon, also known as "true cinnamon". Due to rising world demand and new plantations in-country, Tanzania is poised to become a major source for this popular spice.

Tanzania once ranked as the world's third-largest producer of cardamom. It has the potential to regain this ranking through increased planting and good plantation management

Legumes

Legumes include all forms of beans and peas from the Fabaceae (or Leguminosae) botanical family. There are thousands of different species of legume plants.

The legume family of plants includes pulses which are the dried seed of legumes. The word pulse comes from the Latin word, *puls*, which mean the seeds that can be made into a thick soup. Well known dried legumes include chickpeas, beans (includes butter beans, haricot (navy) beans, cannellini beans, red kidney beans, adzuki beans, black-eyed beans and soybeans), peas, lentils, lupins.

Legumes come in a variety of shapes, sizes and colours and can be consumed in many forms including split, ground in to flours or dried, canned, cooked or frozen whole legumes

Purely Crafted Cereals

Cereals are processed grains from which the inedible parts are removed and some of these are broken into small pieces. Cereals are rich in carbohydrates, vitamins, protein, minerals, and many other nutrients. The term cereal was derived from Ceres, who is the Roman goddess of agriculture.

Today, cereal food is one of the most sought breakfast cereal options across the world since it can be quickly prepared and has high nutritional value. Many ingredients such as milk, grains, sugar, fruits, mixed nuts and berries are used to enrich the cereal. If you want to choose only the healthiest types of cereals, you have to go for the ones with whole grains and avoid extra sugar.

If you have a heart condition or diabetes, you should prefer having whole grain cereal products as it is higher in fiber as compared to refined grains. And if you want to add protein and calcium to your meal, you can add yogurt or milk to your cereals.

Naturally Sisal Fiber

We export premium Tanzanian sisal fiber, renowned for its durability, strength, and eco-friendliness, catering to diverse industries globally. Sourced from Tanzania's semi-arid regions, our sisal is grown sustainably with minimal water and chemicals, supporting local farmers and aligning with global sustainability goals. Through advanced processing and rigorous quality control, we ensure that each fiber batch meets the highest standards in strength, uniformity, and texture. Our sisal fiber serves a range of applications, from twine and rope for agriculture and marine use to eco-conscious home décor and industrial composites. With a commitment to quality, reliability, and environmental responsibility, we are a trusted partner for industries seeking sustainable solutions.

Pure Coffee

Tanzanian coffee is celebrated worldwide for its rich flavors, high quality, and unique character. Grown in the fertile highlands of East Africa, the country's coffee beans are known for their bright acidity, fruity undertones, and full-bodied taste profile. Tanzania primarily produces Arabica coffee, although some robust and high-quality Robusta coffee is also cultivated.

Our company is dedicated to providing premium Tanzanian coffee to the world. We work directly with farmers and cooperatives to ensure fair trade practices and to promote sustainable farming techniques. Our commitment extends from seed to cup, ensuring that each coffee bean retains its unique flavors and meets the high expectations of our international customers.

Cotton

Tanzania produces high-quality cotton primarily in its northwestern and central regions, benefiting from favorable climate conditions and a long history of cotton farming. Known as a "white gold" cash crop, cotton supports the livelihoods of thousands of Tanzanian farmers and serves as a major contributor to the country's economy. The cotton produced in Tanzania is primarily rain-fed and cultivated by smallholder farmers, ensuring a rich quality and contributing to sustainable agricultural practices.

Cocoa

Our company proudly exports premium Tanzanian cocoa, sourced from fertile regions known for their rich flavor profiles. We partner with local farmers, supporting ethical practices and fair trade. Each batch meets rigorous international standards, bringing the distinctive quality of Tanzanian cocoa to markets worldwide.

Vanilla

Our company specializes in exporting high-quality vanilla sourced from Tanzania's fertile regions. Renowned for its rich aroma and robust flavor, Tanzanian vanilla is cultivated using traditional and sustainable farming methods. We collaborate closely with local farmers to ensure ethical sourcing, supporting fair trade practices and empowering local communities.
